

IN THE CLAIMS:

Claim 1 (original): In combination, a host organizer and an ancillary article removable from said host organizer,

said host organizer including –

**an organizer casing having an exterior surface,
an organizer pocket located on the exterior surface of the casing,
the pocket having an exterior surface on which first
releasable attachment means is mounted, and
an organizer flap extending from the casing and over at least a
portion of the exterior surface of the pocket, the flap having
an interior surface on which second releasable attachment
means is mounted, the second attachment means being
complementary to and alignable with the first attachment
means such that the flap is releasably attachable to the
pocket;**

said ancillary article including –

**a body, and
an article flap extending from the body, the article flap having
interior and exterior surfaces on which third and fourth
removable attachment means are mounted,
respectively,
the third attachment means being complementary to the
first attachment means and
the fourth attachment means being complementary to the
second attachment means,
the body being configured to fit in the organizer pocket,
the article flap being adapted to at least partially overlap the
organizer pocket such that the third and the first attachment
means are substantially aligned and the article flap is
releasably attachable to the organizer pocket,**

the organizer flap being adapted to at least partially overlap the article flap such that the second and the fourth attachment means are substantially aligned and the organizer flap is releasably attachable to the article flap.

Claim 2 (original): The combination of claim 1, wherein said host organizer is a loose-leaf binder.

Claims 3-4 (cancelled).

Claim 5 (original): The combination of claim 1, wherein said ancillary article is a wallet.

Claims 6-11 (cancelled).

Claim 12 (original): In combination, a binder and an ancillary article removable from said binder,

said binder including --

a binder cover having an exterior surface,

a binder pocket located on the exterior surface of the cover, the pocket having an exterior surface on which first releasable attachment means is mounted, and

a binder flap extending from the cover and over at least a portion of the exterior surface of the pocket, the flap having an interior surface on which second releasable attachment means is mounted, the second attachment means being complementary to and alignable with the first attachment means such that the flap is releasably attachable to the pocket;

said ancillary article including --

a body, and

an article flap extending from the body, the article flap having interior and exterior surfaces on which third and fourth removable attachment means are mounted, respectively, the third attachment means being complementary to the first attachment means and the fourth attachment means being complementary to the second attachment means, the body being configured to fit in the binder pocket, the article flap being adapted to at least partially overlap the binder pocket such that the third and the first attachment means are substantially aligned and the article flap is releasably attachable to the binder pocket, the binder flap being adapted to at least partially overlap the article flap such that the second and the fourth attachment means are substantially aligned and the binder flap is releasably attachable to the article flap.

Claim 13 (original): The combination of claim 12, wherein said ancillary article is a wallet.

Claim 14 (original): In combination, a binder and a wallet removable from said binder, said binder including –

a binder cover having an exterior surface,
a binder pocket located on the exterior surface of the cover, the pocket having an exterior surface on which first releasable attachment means is mounted, and
a binder flap extending from the cover and over at least a portion of the exterior surface of the pocket, the flap having an interior surface on which second releasable attachment means is mounted, the second attachment means being complementary to and alignable with the first attachment means such that the flap is releasably attachable to the pocket;

said wallet including –

a wallet body, and

a wallet flap extending from the body, the wallet flap having
interior and exterior surfaces on which third and fourth
removable attachment means are mounted, respectively,
the third attachment means being complementary to the
first attachment means and
the fourth attachment means being complementary to the
second attachment means,

the body being configured to fit in the binder pocket,

the wallet flap being adapted to at least partially overlap the binder
pocket such that the third and the first attachment means
are substantially aligned and the wallet flap is releasably
attachable to the binder pocket,

the binder flap being adapted to at least partially overlap the wallet
flap such that the second and the fourth attachment means
are substantially aligned and the binder flap is releasably
attachable to the wallet flap.

Claim 15 (original): The combination of claim 14, wherein the binder cover forms an
interior wall of said binder pocket.

Claim 16 (original): The combination of claim 14, wherein the first, the second, the
third, and the fourth attachment means are snap fastener elements.

Claim 17 (original): The combination of claim 14, wherein the wallet flap is a closure
flap for said wallet.

Claim 18 (original): The combination of claim 14, wherein the wallet body is
configured to fit substantially inside the binder pocket.

Claim 19 (original): The combination of claim 14, wherein said binder is a loose-leaf binder.

Claim 20 (original): The combination of claim 14, wherein said binder further includes a spine, the binder cover being movably mounted to the spine, and wherein the binder pocket contains a pocket opening, the pocket opening being adjacent to the spine.
